

## *Technical specifications for Kalmar ECE90-6L, T32208.0208* with lifting mast and other equipment as described.

Capacities	Lifting capacity:	9000 kg
1	Load center:	600 mm
	Lifting height maks:	4500 mm
	Minimum mast height:	3435 mm
Lifting mast:	Standard duplex with chains and hoses mounted with maximum in view.	
Camiaca	Early truck with adaphift/arroad	
Carriage:	Fork truck with sideshift/spread Forklift width:	2000 mm
	FOIKIIII WIQUII.	2000 IIIII
Forks:	Dimension	250x50x2000mm
Measurements:	Length without forks:	4120 mm
	Wheelbase:	2800 mm
	Width:	2000 mm
	Height without mast:	2570 mm
	-	
Cab:	<b>Spirit Delta cabin,</b> Globetrotter with internal height 1720 mm (+200 mm) is built to satisfy the current high requirements for safety, ergonomics and driver environment. Steering wheel, driver's seat and control levers for hydraulics are individually adjustable to ensure the best possible driver comfort. Heater and defroster system also contribute to this. Fresh air is supplied through a compartment filter.	
Engines:	Make:	Thrige
8	Drive engine power:	31 kW
	Pump engine power:	27 kW
Drive shaft:	Make:	Kessler
Drive shaft:	Make: Type:	Kessler With hub reduction and differential
Drive shaft: Steering axle:	Type: Kalmar's self-developed, with ve minimal moving parts. The shaft	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large
Steering axle:	Type: Kalmar's self-developed, with ve minimal moving parts. The shaft powerful, maintenance-free sphe wheel run-out which results in a	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large small turning radius.
-	Type: Kalmar's self-developed, with ve minimal moving parts. The shaft powerful, maintenance-free sphe wheel run-out which results in a Drive wheels 4 pcs.	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large small turning radius. 8,25 x 15 air rubber tires
Steering axle:	Type: Kalmar's self-developed, with ve minimal moving parts. The shaft powerful, maintenance-free sphe wheel run-out which results in a	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large small turning radius.
Steering axle:	Type: Kalmar's self-developed, with ve minimal moving parts. The shaft powerful, maintenance-free sphe wheel run-out which results in a s Drive wheels 4 pcs. Steering wheel 2 pcs.	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large small turning radius. 8,25 x 15 air rubber tires
Steering axle: Wheels and tires:	<ul> <li>Type:</li> <li>Kalmar's self-developed, with ve minimal moving parts. The shaft powerful, maintenance-free sphe wheel run-out which results in a solution of the self self self self self self self sel</li></ul>	With hub reduction and differential ry powerful double-acting steering cylinder and is attached to the frame using two very rical rubber elements. The construction allows large small turning radius. 8,25 x 15 air rubber tires 8,25 x 15 air rubber tires with main circuit breaker installed. oil-cooled disc brakes that eliminate extremely high loads over a long period of time. The unaffected by moisture and pollution. input shaft of the drive shaft. This
Steering axle: Wheels and tires: Electrical equipment Brakes:	<ul> <li>Type:</li> <li>Kalmar's self-developed, with ve minimal moving parts.
